HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

MONUMENTUM: Digital 3D modeling and data management for the conservation of decorated stone buildings

➤ MONUMENTUM on-going research project (2013-2017)

The investigations that are made on a building for conservation purposes need an important work that is transcribed in a lot of kind of numerical and printed data: surveying data and scientific imagery, damage mapping, photographic collections, historical archives, physical and chemical data etc. Given the difficulty to collect, compare, analyze and validate data prior to restoration, the presented approach aims to mobilize various disciplines (architecture, conservation, mechanics, and computer sciences) to define a novel information processing chain including metric surveys, analysis of surfaces, geometric models of structures, heterogeneous documentary sources management, temporal data, etc.

➤ Objective

- Designing and development of an open and extensible web platform for the capitalization and the management of knowledge needed for the understanding and analysis of degradation phenomena affecting historic buildings.
- It requires the definition of a common and continuous process that establish a technological and conceptual interconnection between the stages of 3D digitization, semantic annotation and structuring of the geometric model (including multi-layers analysis of surfaces), characterization of the state of the building and management of restoration actions.
- it concerns the image-based-modeling of architectural heritage, the development of a 3D information system for the management of conservation data and also a numerical modeling tool (FEM-DEM) for the physical and structural analysis.

➤ Sites

3 French cases studies that present conservation issues on:

- stones, Castle of Chambord and Caromb's church,

- wall paintings, Notre-Dame des Fontaines' chapel

Image: PRISME

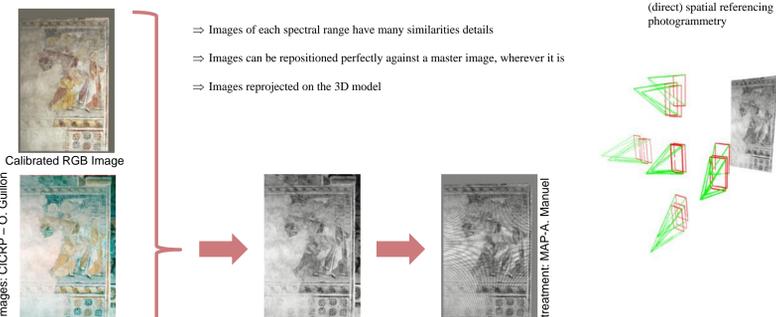

Images et scans: MAP - E. Gattet & T. Messaoudi

Fusion of multi-band imaging

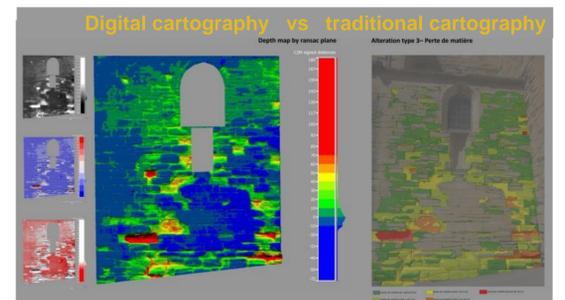

- ⇒ Images of each spectral range have many similarities details
- ⇒ Images can be repositioned perfectly against a master image, wherever it is
- ⇒ Images reprojected on the 3D model

AND/OR

(direct) spatial referencing using photogrammetry

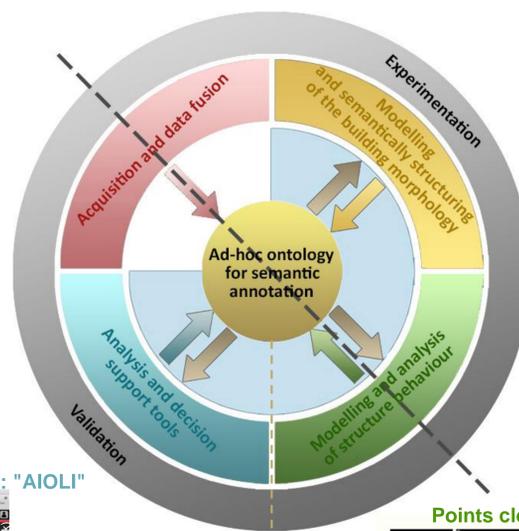

Use of thesaurii as:

Modeling - MAP, univ. Polytech. Delle Marche R. Nespeca

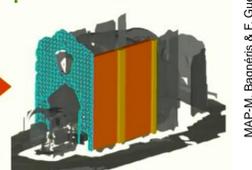

Mapping - CICRP, A. Benard

From the points cloud to the geometry model

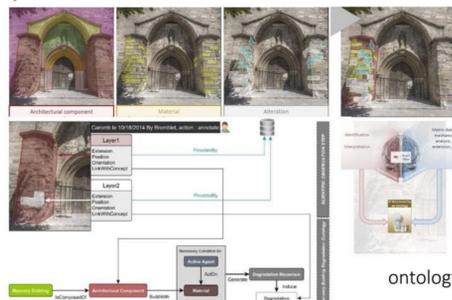

Construction of parameterized volume

⇒ Parametric model in development

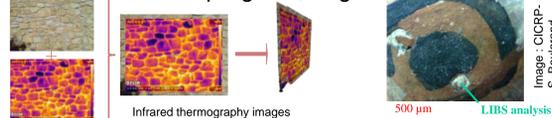

Towards an ontology for annotating degradation phenomena

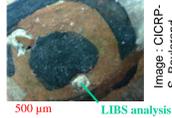

MAP-T. Messaoudi (PhD work)

ontology ▶ data + information

In progress, e. g.

Infrared thermography images

500 µm LIBS analysis

On progress "Monumentum tool": "AIOLI"

MAP-A. Manuel (finalisation PhD work)

➤ Results

- **Scientific advances:** Identification of a continuum of spatial information structured around a domain ontology, new protocols to acquire spatialized data, to analyze them
- **Technical advances:** 3D scanning using images, data fusion, 3D information system for cultural heritage.
- **On-going computer platform:** Cloud service; some calculation moduli already inserted, web interfaces concerning the interaction 2D/3D, 2nd beta testing cycle in progress

2017: finalization of the computer platform dedicated to conservation scientists, conservators and sites managers

Acknowledgements: This ongoing study is financed by ANR (French National Agency for Research). The authors thank all the other colleagues (and more especially S. Janvier (PRISME), S. Boularand (CICRP), E. Gattet, F. Guéna and A. Pamart (MAP) and students (and more especially A. Benard, F. Peteler, A. Manuel, T. Messaoudi), that are/were involved in this project and allow its development.
